Programming task

Todo app

Prefered technologies: react, django rest framework but feel free to use your favourite stack.

Summary

Create a Todo listing app where users can login, add items to their Todo list, mark them as done and delete them. With an admin panel where the admin can manage the registered users.

Requirements

1. Frontend and backend talk through a rest API.
2. Users can register and login using email and password. Email verification is a plus.
3. Users can view their Todo list.
4. Users can add items to their Todo list.
5. Users can mark items as done.
6. Users can remove items from the list.
7. Admins can list all users.
8. Admins can see the last access date if any user.
9. The source code should be pushed to a github repository.
10. (Optional) users can import Todo lists from a text file in the following format.
    [ ] First item
    [ ] Second item
    [x] third item

Deadline

The deadline for this project is 1 week from the time the task is sent.

Deliverables:
        Please, push your code to github and share it with us.
